

Senatla Ops

Operations Runbook

Release, rollback, incident and offline recovery guidance.

VERSION	1.0
DATE	23 June 2026
STATUS	Controlled release baseline
CLASSIFICATION	Confidential - internal use

Prepared by Sankofa Digital Studio for Senatla Trading

Table of contents

Release	3
Rollback	3
Incident handling	3
Offline recovery	3

Release

1. Confirm the issue and approved pull request contain acceptance evidence. 2. Back up the production database and record the recovery point. 3. Apply migrations in preview and run role-negative tests. 4. Deploy the immutable web artifact with review bypass disabled. 5. Smoke-test each role, asset lookup and one read-only dashboard path. 6. Record version, migration identifiers, approvers and rollback point.

Rollback

Stop new writes when data integrity is uncertain. Restore the prior web artifact first for application-only regressions. For schema failures, use the documented compensating migration; do not edit applied migration files. Restore from backup only after Operations and the technical lead confirm data-loss implications.

Incident handling

Preserve logs and audit events, rotate exposed credentials immediately, revoke affected sessions, identify impacted organizations and records, and avoid placing personal information in tickets. Notify Operations, Finance and the technical lead according to impact.

Offline recovery

Do not delete failed outbox records. Inspect idempotency key, attempt count and error; correct the underlying conflict; retry once; escalate repeated failures with the original audit reference.
