

Senatla Ops

Testing Strategy

Static, database, browser, finance and recovery evidence gates.

VERSION	1.0
DATE	23 June 2026
STATUS	Controlled release baseline
CLASSIFICATION	Confidential - internal use

Prepared by Sankofa Digital Studio for Senatla Trading

Table of contents

Placeholder for table of contents	0
-----------------------------------	---

Layer	Required evidence
Static	ESLint plus application and specification TypeScript compilation
Unit	Components, services, route guards, calculations and identifier normalization
Database	Clean migration reset, role-positive and role-negative pgTAP contracts
Browser	Login-to-workspace flow, asset lifecycle action, desktop and 390 px layout
Resilience	Idempotent retry, duplicate submission and recovery
Finance	Reconciliation, masking, approvals and immutable payroll periods
Release	Production build, backup/restore rehearsal and rollback check

A successful build is not a browser test. A successful client test is not proof of RLS. Evidence must identify the command, environment, result and remaining risk.
